

Introdução às Funções Orgânicas

Hidrocarbonetos

Apresentam apenas carbono e hidrogênio.

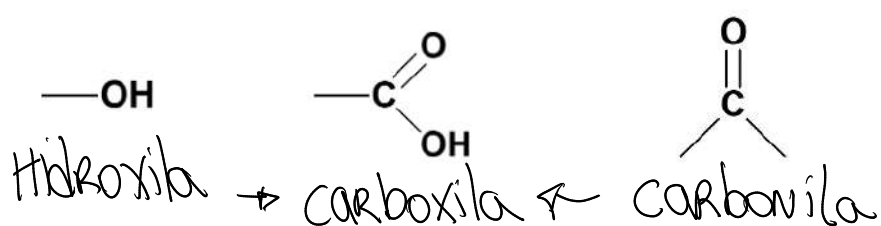

H e C

Exemplos:

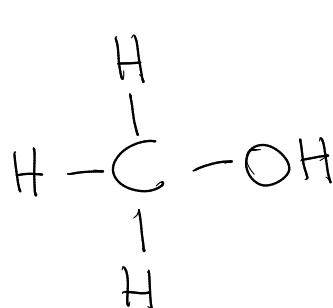

H omitido
C nas pontas
e vértices.

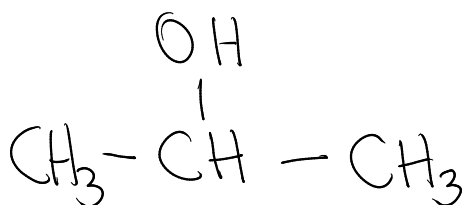

Funções oxigenadas

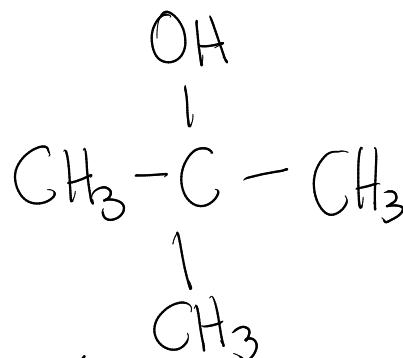

1- Álcoois, enóis e fenóis (—OH)

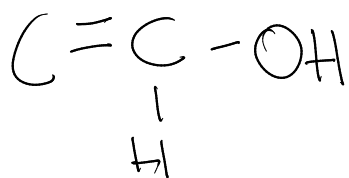

Álcool primário

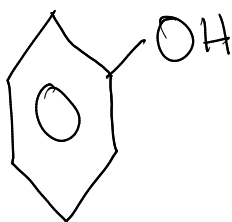

Álcool secundário

Álcool terciário

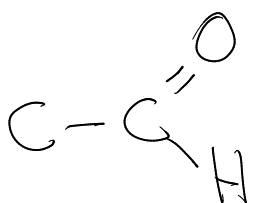

ENOL

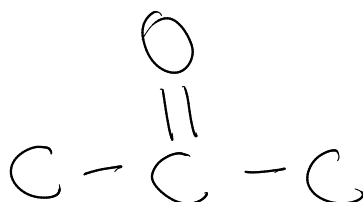

FENOL

2- Cetona e aldeído

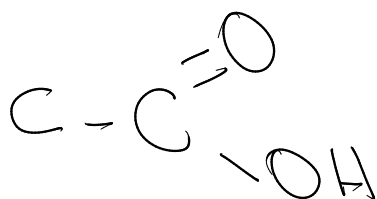

Aldeído

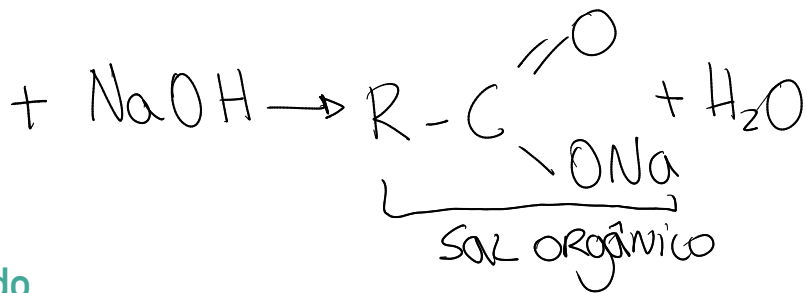

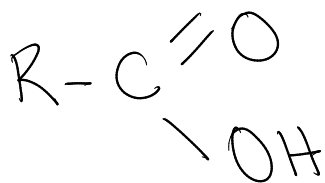

Cetona

3- Ácido carboxílico

Ácido carboxílico

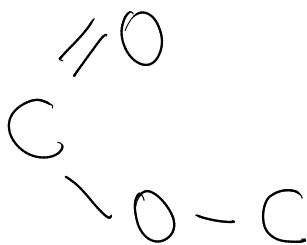

4- Sal de Ácido carboxílico

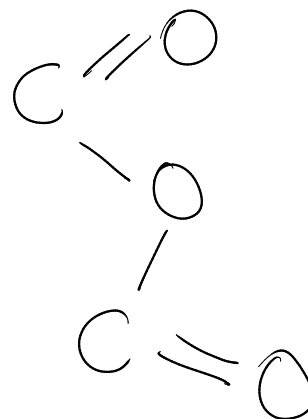

5- Éter, éster e anidrido

Éter

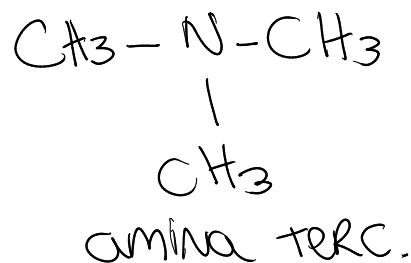

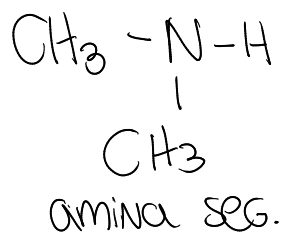

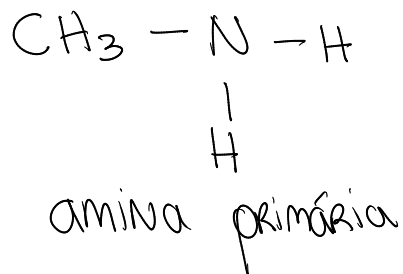

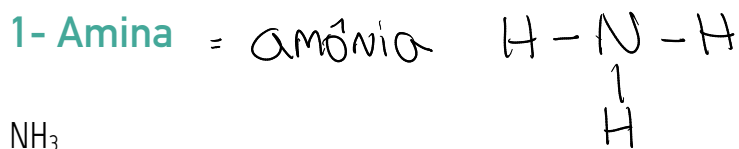

ÉSTER

ANIDRIDO

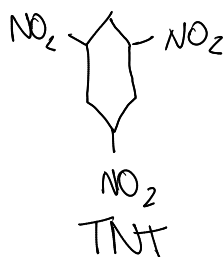

Funções nitrogenadas N e O

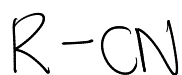

2- Amida

3- Nitrocomposto NO_2

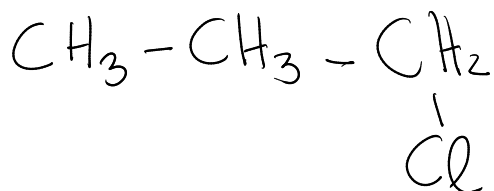

4- Nitrila CN

Compostos halogenados → elemento da Fom. 7a

1- Haleto de alquila

2- Haleto de acila
