

Aprofundamento Final

Cálculos

	A	B
Equilíbrio	2mol/L	2mol/L

Sabendo que o recipiente tem $V=1L$, adiciona-se 2mols de A. Qual será a concentração de cada reagente quando o novo equilíbrio for atingido?

	A	B
início	4mol/L	2mol/L
Reage e forma	$X = 1$	$X = 1$
equilíbrio	$4 - X$	$2 + X$

$$K_c = \frac{2 + X}{4 - X} = 1$$

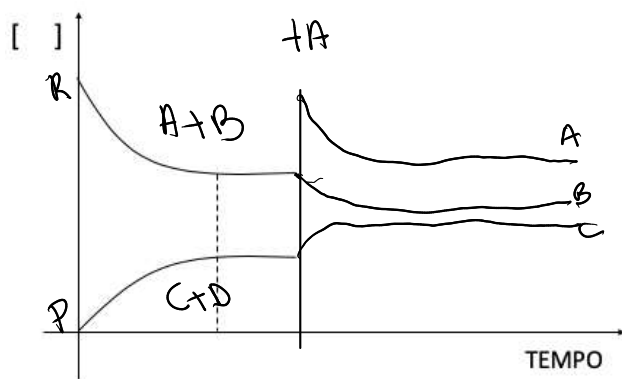

$$K_c = 2X = 2$$

$$X = 1$$
